

## TH RIDGE VENTILATOR SYSTEM

The greatest ventilation system is designed to remove heat, fumes, or contaminated air from a building; to create a cooler, more comfortable workplace, to illuminate waste and gaseous by-products that constitute hazard to health within the building, moving into a high-tech niche green environment'.

Based on 'Number of Air Changes' method, calculations can be utilized in the design of effective ventilation system with the relevant design parameters set.

Currently five ( 5 ) models of correct throat size ventilators are manufactured to create a competitive advantage in cost and performance to meet all site conditions and requirements:

Model	Overall Size
THV-600	1650 X 1080
THV-900	2700 X 1680
THV-1200	3100 X 1930
THV-2400	6000 X 3700
THV-3000	6600 X 3504

*For a cooler, comfortable workplace  
in a cleaner and healthier environment.*
